

SUMMARY

Computer Science graduate with hands-on experience in **Java, Python, SQL, Spring Boot, databases, and software development**. Experienced in building application features, implementing business logic, working with structured data, and solving technical problems. Strong foundation in **Object-Oriented Programming, Data Structures and Algorithms, DBMS, Git**, with professional experience in high-volume analytical and investigation environments.

EXPERIENCE

Investigation Specialist Amazon	June 2026 – Present Hyderabad, Telangana, India
- Analyze high-volume cases and structured information to identify discrepancies, patterns, and potential issues using logical and analytical approaches. - Investigate complex issues, document findings, and apply structured decision-making processes to deliver accurate outcomes. - Manage multiple priorities in a fast-paced environment while maintaining accuracy, quality, and productivity standards.	
Process Associate – Content Moderation Genpact	June 2025 – June 2026 Hyderabad, Telangana, India
- Reviewed and classified high-volume user-generated information using defined guidelines while maintaining 98%+ accuracy. - Analyzed inconsistencies and recurring patterns, investigated exceptions, and collaborated with quality teams to improve process accuracy. - Maintained accurate records and handled multiple priorities while consistently meeting quality and SLA requirements.	
Software Development Intern EdzeQ	May 2024 – June 2024 Hyderabad, Telangana, India
- Developed application features using Java, Spring Boot, SQL, REST APIs, and relational databases. - Implemented application logic, worked with structured data, and developed backend functionality for application workflows. - Used Git for version control and collaborated on software development activities.	

EDUCATION

Malla Reddy Engineering College Bachelor of Technology in Computer Science (Artificial Intelligence & Machine Learning)	Hyderabad, Telangana, India 2021 – 2025
---	--

CGPA: 7.8 / 10

TECHNICAL SKILLS

Languages	: Java, Python, SQL
Core CS	: Object-Oriented Programming, Data Structures and Algorithms, DBMS, Problem Solving
Web	: HTML, CSS, JavaScript, REST APIs
Databases	: MySQL, MongoDB, Relational Databases
Tools	: Git, GitHub, VS Code, Microsoft Excel

PROJECTS

Blockchain-Based Secure Voting System

Python, REST APIs, SQL

[Source Code](#)

- Developed a secure voting application using **Python and Flask** with backend workflows for processing and validating voting data.
- Implemented validation and data integrity mechanisms to improve the reliability of application records.
- Applied structured programming and problem-solving concepts to handle application workflows and data validation.

Advance Cure – Healthcare Platform

Python, MongoDB

[Source Code](#)

- Developed a healthcare application supporting appointment scheduling and medicine management workflows.
- Implemented application functionality using **Python, Flask, and MongoDB** for data storage and retrieval.
- Worked with structured application data and developed workflow logic for core platform features.

IPL Playing XI Builder

HTML, CSS, JavaScript, Data Processing

[Source Code](#)

- Developed a rule-based web application that processes player data and generates Playing XI combinations based on defined conditions.
- Implemented input validation and application logic to handle different user selections and scenarios.
- Built a responsive interface and deployed the application using GitHub Pages.

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)
- Python Programming
- Data Structures and Algorithms
- Machine Learning with Python
